Project overview

- e-SENS is an European Project that will facilitate access of citizens and businesses to public services across borders. The project main objectives are:
  - Provide easy access to public administrations online,
  - Use the potential of ICT to ensure interoperability across different national systems,
  - Develop generic and re-usable solutions for electronic services in public administration.

- The existing Large Scale Pilots have already proven that providing cross-border services can be made simpler. Essence of e-SENS : consolidate and solidify the work done, to industrialize the solutions and to extend their potential to more and different domains.
